

Data structure

Thursday, October 12, 2017 3:56 PM

```
{
  Key: fealIndex
  V:[feature_name_list]
  Key:query
  V:{
    Key: left 10 words + [mention] + right 10 words
    V:
    {
      candidates: [candidate_name_list]
      candidates_score: [candidate_score_list]
      candidates_attributes: [candidate_attribute_list] - each element is a list which contains attribute_num elements
      mention_doc_context: a string
      isGold: index of the gold answer, if cannot find candidate or gold answer not in candidate list, assign 'NONE'
    }
  }
}
```

candidates_context are from wiki_dump

transfer this json to batches

map them to idS

注意注意！！

原来用错了 应该是mention_doc被用作ctx! 不是local_ctx
